

# External Style Sheet – HTML Code

You are able to view the code on the right in the browser window below. Use a text editor and copy the code on the right to create your own External Style Sheet.

When you are done, change the font color in the style section of the code. Refresh the browser and notice how fast the change appears on all the website pages!

```
styles.css

.Title {
  font-family: Arial;
  color: red;
  font-weight: bold;
  font-size: 36px;
  text-align: center;
}

.Topic {
  text-align: center;
  font-family: Arial;
  font-size: 20px;
  font-weight: bold;
  color: blue;
}

.Text{
  font-family: Verdana, Geneva, sans-serif; The reason I put multiple fonts is because if the users
  computer does not have the first font, then it will apply the second font, and so on.
  font-size: 16px;
  font-style: normal;
  color: black;
  color: darkgreen; !The reason I inserted two color rules (green then black ) is to demonstrate
  that the second color will take precedence over the first color.
}

.Link{
  font-family: Arial;
  color: purple;
  font-size: 16px;
  text-align: center;
}
```

```
